ABSTRACT

The invention discloses a livestock and poultry waste degradation tank and a degradation system thereof. The degradation tank includes a degradation tank. The degradation tank is provided with a degradation chamber. The degradation chamber is rotatably provided with a stirring shaft. A spiral-shaped stirring blade is fixed on the upper side, and a spreading device is provided on the upper side of the degradation chamber. A spraying head is provided in the spreading device. The material head is rotated to stir and mix the waste and the degradation leaves. The present invention discharges livestock waste into a closed space for degradation, and simultaneously extracts the gas generated by the degradation and replenishes the air. Degradation is good, and layer by layer method is used to stir the filler while mixing, so that the waste and the degradation solution are better mixed.
