

ABSTRACT

The present invention is a liquid detergent composition for tableware and/or kitchen hard articles containing: (a) a nonionic surfactant with an HLB of 10.5 or less (provided that (b) is excluded); (b) a glycoside having a hydrocarbon group with 8 or more and 18 or less carbons and a glycoside group with an average degree of condensation of 0.5 or more and 3 or less; and (c) an organic solvent with a logPow of 0 or more and 1.5 or less [hereinafter, referred to as component (c)], wherein the content of (a) in all surfactants is 30 mass% or more and 95 mass% or less, a mass ratio of component (c) to the content of (a), $(c)/(a)$, is 2 or more and 8 or less, and a viscosity at 20° C is 20 mPa·s or less.
