TREATING PANCREATIC CANCER AND NON-SMALL CELL LUNG CANCER WITH ATR INHIBITORS

Abstract

This invention relates to methods and compositions for treating pancreatic cancer. More specifically, this invention relates to treating pancreatic cancer with certain ATR inhibitors in combination with gemcitabine and/or radiation therapy. This invention also relates to methods and compositions for treating non- small cell lung cancer. More specifically, this invention relates to treating non-small cell lung cancer with an ATR inhibitor in combination with cisplatin or carboplatin, etoposide, and ionizing radiation.
