CUSTOMIZABLE SPREADSHEET TABLE STYLES

ABSTRACT

Table styles provide a way to format an entire spreadsheet table quickly and easily. According to described implementations, table styles can be created and customized for repeated use in a spreadsheet application. As a result, a user does not have to manually modify multiple formatting options for each table included in one or more spreadsheets. A graphical user interface is also described that provides simple user access to existing table styles that can be modified according to the user's requirements.
