STRUCTURE FOR ATTACHING A DECORATIVE COVER
FOR AN EAVES GUTTER

ABSTRACT OF THE DISCLOSURE

An eaves gutter is attached to a lower side of a gutter bracket which is mounted on a building, and a support member is disposed on the gutter bracket so as to be upward projected from. A decorative cover which substantially covers the whole of the upper opening of the eaves gutter is detachably attached to the support member. The upper opening of the eaves gutter can be substantially covered by the decorative cover. The decorative cover can block snow so that snow does not fall into the eaves gutter. Since the decorative cover is detachably attached to the support member, the decorative cover can be easily detached from the support member even when a damage or the like occurs in the decorative cover.
