(54) Title: METHOD OF TRANSMITTING INFORMATION DATA FROM A SENDER TO A RECEIVER VIA A TRANSCODER

(57) Abstract

A method of transmitting information data from a sender to a receiver via a transcoder is proposed. The information data comprises confidential information data which is encrypted and non–confidential information data. Security information and transcoding–type information is sent together with the partly encrypted information data to the transcoder which uses the security information and transcoding–type information during a transcoding step. The encrypted confidential information data is thereby transcoded without using its content while the non–confidential information data is transcoded, having access to its content.
