

ABSTRACT

The present application belongs to the technical field of computers. Disclosed are a method and apparatus for disabling a virtual object, and a device and a computer-readable storage medium. The method comprises: displaying a first page, which corresponds to a virtual-object disabling link (801); receiving a disabling help-seeking request (802); and in response to the end of the virtual-object disabling link, when no disabling operation for any virtual object is detected in the virtual-object disabling link, setting the state of a virtual object corresponding to the disabling help-seeking request (803) to a disabled state. The method can not only improve the efficiency of disabling a virtual object, but also prevents a virtual object from being disabled unnecessarily, thereby making a virtual-object disabling stage more complete.
