ABSTRACT

As a radio communication CPU 89 controls each section by using network setting information in a network setting storage section 86 of a radio communication device 3 included in a short distance radio communication network, a connection relation with a communication network (for example, the Internet) is set and transmission/reception of data to/from an equipment included in the communication network via the short distance radio communication network is controlled. Thus, the network setting or the like for connecting to the Internet or the like is simplified for each portable equipment existing in the short distance radio communication network.
