

AIRFLOW FORMATION SYSTEM AND METHOD OF PRODUCING AIRFLOW FORMATION SYSTEM

[ABSTRACT]

5

An airflow formation system (100) includes an air conditioning system (1) and a circulation mechanism (2). The air conditioning system (1) supplies air to a target space (4) from an upper space (44) above a ceiling (41) of the target space (4), and discharges the air
10 from the target space (4) to the upper space (44). The circulation mechanism (2) forms a circulation path (20) in which the air in the target space (4) is taken from a position closer to a floor (42) than the ceiling (41) of the target space (4), and the taken air is circulated to the upper space (44).
