

ABSTRACT

A cleaning sheet (1) includes a scraping layer (5) and a water absorbing layer (4) that are stacked. The scraping layer (5) is made of an air-laid non-woven fabric in which fiber intersection points of large-diameter fibers (2) are joined, a plurality of the
5 large-diameter fibers (2) stand upright, and tip portions of the large-diameter fibers (2) are present on a surface of the scraping layer (5). The scraping layer (5) includes spaces between the large-diameter fibers (2), and abrasive particles (6) are detachably present in the spaces. The abrasive particles (6) are not substantially attached to tip regions including the tip portions of the large-diameter fibers (2) that are present on the surface of
10 the scraping layer (5).
