(54) Title: GAMING TABLE SYSTEM FOR ERROR REDUCTION AND EFFICIENCY

FIG. 1

(57) Abstract: A gaming table system for error reduction and efficiency are disclosed. The gaming table system include a gaming table can have sensors for determining the values of the dealt cards. Additional table sensor can use used to determine the players bet and prospective payout. Intelligent markers can be integrated with the system, where the markers preferably include a mechanism for signaling the receiving better to acknowledge receipt of the marker, which acknowledgement may turn off the indicating mechanism. The method of indication could be visual, audible or otherwise which would signal a better to interact with the marker. The intelligent markers communicate with table sensors and a shoe to monitor the status of games, and to signal alerts when a mistake occurs.
