

CUSTOMIZING FINANCIAL INSTITUTION SOFTWARE APPLICATIONS FOR CONSUMER PAYMENTS

Abstract

The present disclosure generally relates to an electronic system and computerized method for customizing financial institution software applications. The method is performed by a payment network system and comprises: receiving, from a financial institution, a request to customize a software application provided by the financial institution to consumers for consumer payments, the request comprising identification data of the financial institution; retrieving, from an application services database, details of a set of application services available for integration into the software application, the application services associated with consumer payments; communicating, to the financial institution, the application services details for selection by the financial institution; receiving, from the financial institution, details of the application services selected by the financial institution; generating a customized solution package comprising the selected application services; and communicating the customized solution package to the financial institution for integrating the selected application services into the software application.
