

Abstract

Method and device for screening drug

The present invention provides a method for determining the efficacy of anti-tumor drugs in a time-efficient manner, comprising the following steps:

- 5 (1) transferring a primary tumor cell into an implant device;
- (2) implanting the implant device comprising the primary tumor cell into an
 animal;
- (3) administering a candidate drug to the animal;
- (4) determining the sensitivity of the tumor cell to the candidate drug.
