(54) Title: WASTE COLLECTION AND MANAGEMENT

FIG. 1

(57) Abstract: In a method for the management of waste deposited in waste inlets and collected in under-ground waste containers (5) that are emptied by opening a wall section thereof as the container is in a raised emptying position by a collecting vehicle (20), waste inlets (2; 2'; 2'') are positioned at optional locations by detachably connecting spaced waste inlets to a designated waste container through waste suction piping (4) and by detachably connecting the container to a vacuum source (10) through separate air exhaust piping (9). The invention also concerns a waste collection and management system as well as an underground waste collection container.
