ABSTRACT

This disclosure provides a PC based set top box system to connect to a private site and a method of providing content exclusively using this system. This system includes a PC equipped with private browser operating software to operate a set top box to connect to a particular site and register user information when installing for the first time. Serial communication is provided with the set top box, which asks for log in permission to server when an operating order signal is received from set top box. Operating permission is sent when log in is permitted. Transmission of the PC's video and audio to the TV are provided when operation permission is received from the PC. An exclusive offering of content is possible when connected to the Internet site permitted by the PC based TV set top box. The set top box includes software where it is possible not to allow access to other sites.
