(54) Title: SERVICE OUTLET FLOOR BOX WITH DEPTH ADJUSTMENT

(57) Abstract: A service outlet floor box includes a frame (1) and a connector module (2) mountable in the frame at a plurality of depths within the frame (1). The connector module (2) has a first fixing configuration in which a fastening part (16, 17) of the module projects outwardly for engagement with the frame (1) to mount the module (2) in the frame, and a second released configuration, the module (2) being able to be secured in the frame at a selected one of the plurality of depths within the frame when it is in the first fixing configuration with the fastening part (16, 17) of the module projecting outwardly and engaging a selected part of the frame to obstruct removal of the module (2) from the frame (1), and being releasable from the frame by changing the module into the second released configuration in which the fastening part (16, 17) of the module no longer obstructs removal of the module from the frame.
