(54) Title: SYSTEM, NETWORK, MOBILE TERMINAL, COMPUTER PROGRAM PRODUCT AND METHOD FOR CROSS-PAGING A MOBILE TERMINAL VIA A DATA BURST MESSAGE

(57) Abstract: Systems and methods are provided to permit a network, such as a data only network (e.g., cdma2000 1X-EVDO), with which a mobile terminal is not currently communicating to notify the mobile terminal that the network desires to establish communication with the mobile terminal, even in instances in which the mobile terminal is actively communicating via another network, such as a voice and data network (e.g., cdma2000 1X) and has stopped monitoring for paging messages. The mobile terminal can then end communications with the network with which it has been previously communicating and commence communications with the other network that has transmitted the paging message. For example, a mobile terminal may terminate voice communications via a voice and data network in order to receive a MMS message via a data only network upon receiving notification that the data only network desires to establish a communications session with the mobile terminal.
