(54) Title: METHOD AND SYSTEM TO REMOTELY MONITOR A CARBON ADSORPTION PROCESS

(57) Abstract: In a method for treating a contaminated fluid stream, a characteristic of a flow of the composition to a carbon adsorption zone (12) is sensed. The sensing is remotely monitored to determine a treatment for the contaminated fluid stream. The contaminated fluid stream is then treated according to the monitoring. A system (10) for treating a contaminated fluid stream comprises a sensor (36) that senses a characteristic of a flow of a contaminated fluid stream prior to treatment and a monitor (24) to receive information concerning the characteristic from the sensor (36) and to consequently control the carbon adsorption zone (12) to treat the contaminated fluid stream. The monitor (24) is situated at a location remote from the carbon adsorption zone (12).
