

ABSTRACT

There is provided a mounting method for a building surface material that has good mounting properties and that ensures a predetermined adhesive area, in which a base material and a building surface material can be mounted via an adhesive. A mounting method of a building surface material for mounting the building surface material 10 to a base material 40 made of steel, the mounting method including a temporary fixing step of temporarily fixing a part of a back surface 12 of the building surface material 10 to an adhesive 80 adhered to a mounting surface 41 of the base material 40; and a main fixing step of bringing a magnetic attraction jig M in contact with a front surface 11 on an opposite side of the back surface 12 of the building surface material 10, and moving the magnetic attraction jig M along the adhesive 80 to attract the base material 40 by an attraction force F of the magnetic attraction jig M and pressure-bond the building surface material 10 and the base material 40 to each other.
