(54) Title: MARINE FENDER LOAD MONITORING

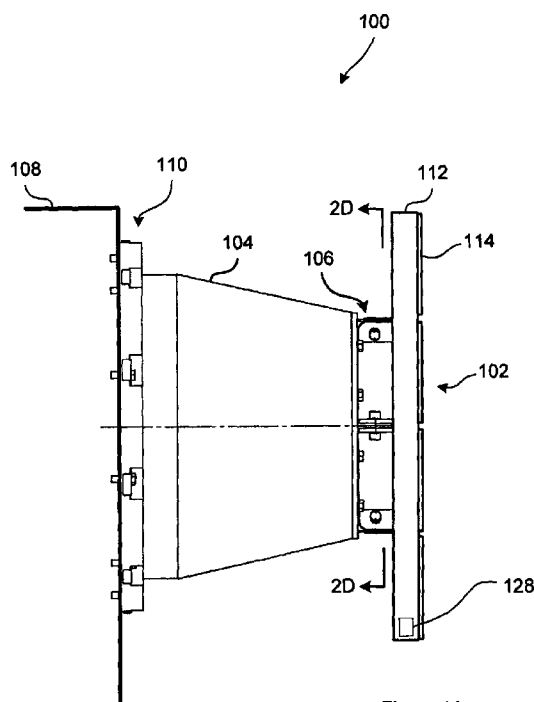

Figure 1A

(57) Abstract: Described herein is a marine fender (100) for mounting to a structure (108) and a mounting assembly (110) for a marine fender. The marine fender (100) includes a facing assembly (102) for bearing against a vessel and a resilient fender element (104) for absorbing forces on the facing assembly (102). The fender element (104) is mounted between the facing assembly (102) and the structure (108). One or more load sensing elements are positioned to measure forces applied to the facing assembly (102) and outputting force data relating to the measured forces.
