ABSTRACT OF THE DISCLOSURE

VIDEO DISPLAY APPARATUS AND CONTROL METHOD OF VIDEO DISPLAY APPARATUS

A video display apparatus comprises an obtaining unit configured to obtain installation data representing an installation condition of a camera; an accepting unit configured to accept a movement of a cut position of a cut video obtained by cutting a part of a video captured by the camera; and a control unit configured to, based on the installation data, switch an image representing a moving direction of the cut position on the video in a case in which the movement is accepted by the accepting unit and superimpose the image on the video.
