

ABSTRACT

EMBRYONIC ERYTHROBLAST-CONTAINING CELL POPULATION AND METHOD FOR PRODUCING SAME, CELL CULTURE COMPOSITION, AND COMPOUND TEST METHOD

5

10 Provided is a method for producing a cell population containing embryonic erythroblasts, including the steps of: (1) subjecting pluripotent stem cells to suspension culture to form a cell aggregate; and (2) obtaining the cell population from the cell aggregate obtained in step (1), step (2) including step (2a) of subjecting the cell aggregate to adhesion culture. In addition, provided are an embryonic erythroblast-containing cell population, a cell culture composition containing the cell population, and a compound test method that uses the embryonic erythroblast-containing cell population.
