

WASHING MACHINE

ABSTRACT

5 Washing machine (100) for washing clothes includes: housing (200)
including top wall (250), the top wall (250) having front end (251) and rear end
(252) at an opposite side of front end (251); cover member (400) that partially
covers top wall (250); receiving unit (500) that receives an operation command
concerning an operation content of washing machine (100); and a water supply
10 port to supply water into housing (200). Cover member (400) has an opening
from which the water supply port is exposed. Receiving unit (500) is mounted on
cover member (400). Thus, washing machine (100) that hardly causes an electric
failure is provided.
