(54) Title: RESILIENT PRODUCT

(57) Abstract: This invention relates to resilient product including a relatively soft working section (2) secured to a surface of a relatively hard interlayer (4). An opposed surface of the interlayer (4) includes a mounting section (3) which functions to secure the resilient product to a support. The resilient product is particularly suitable for providing a sealing member or a resilient mounting member. The ability of the resilient product to be secured to a support, and remain secured to that support is a particular advantage.
