(54) Title: AIR TRANSPORTABLE ISO CONTAINER

(57) Abstract: A transport device includes a base, a plurality of movable ISO corner blocks movably coupled to the base, and a plurality of adjustment mechanisms. Each adjustment mechanism is adapted to couple a respective corner block to the base and to selectively move the corner block with respect to the base between an air transport position, wherein the bottom surface of the corner block does not extend beyond the bottom surface of the base, and a surface transport position wherein the bottom surface of the corner block is located below the bottom surface of the base.
