

Abstract

The present disclosure relates to a method for urgently sending a message, an apparatus, a system, and a storage medium. The method comprises: in response to an operation for urgently sending a target message, displaying an urgent send interface, the urgent send interface comprising a plurality of urgent sending modes; in response to an operation of selecting a target urgent sending mode, determining whether an urgent send object selected on the urgent send interface satisfies an interception condition corresponding to the target urgent sending mode; and when an interception condition is satisfied, displaying the intercepted urgent send object and a reason for interception on the urgent send interface.
