Abstract

The invention pertains to a driving roll for a roller way or conveyor belt in which at
10 least one roller base (102) is provided with a universal coupling device (106, 114),
modular drive wheels (104) corresponding to the coupling device (106, 114) are
formed and a variable number of drive wheels (104) can mesh with the coupling
device (106, 114) (Figure 1).
