(54) Title: MULTIVALENT ANTIBODY

(57) Abstract: The invention relates to a multivalent antibody which comprises: a base antibody portion which comprises two binding domains; and at least one additional binding domain, wherein the base antibody portion is connected by a linker to the at least one additional binding domain, wherein each binding domain of the base antibody portion and each of the at least one additional binding domains all have a common variable region, and wherein the linker comprises a hinge sequence or a sequence derived from a hinge sequence. The invention also relates to a multivalent antibody which comprises: a base antibody portion which comprises two binding domains; and at least one additional binding domain, wherein at least one additional binding domain comprises a CH1 region and is connected to the base antibody portion by said linker, linking a variable region of the base antibody portion and the CH1 region, and wherein the multivalent antibody binds to at least three different epitopes.
