

ABSTRACT

To provide a laminate having a silver layer and a light-absorbing layer in combination, of which changes of optical properties and occurrence of a haze due to a heat treatment are suppressed.

- 5 A laminate comprising a transparent substrate and a laminated membrane provided on the transparent substrate, wherein the laminated membrane contains, in order from the transparent substrate side, a layer having two layers of a first dielectric layer and a silver layer formed in contact with each other in this order, and further a layer having three layers of a light-absorbing layer, a first barrier layer and a second
- 10 dielectric layer formed in contact with one another in this order.
