

ABSTRACT

MASSAGE MACHINE

Provided is a massage machine enabling an effective massage treatment by a pair of left and right massage members even for users having various sizes or thicknesses of treatment regions. A massage machine (1) according to the present invention includes: a pair of left and right massage members (2) provided so as to hold a treatment region; a rotating shaft (10) provided so as to laterally penetrate the left and right massage members (2); a drive unit (5) for rotationally driving the rotating shaft (10); and a conversion part (12) for converting a rotating force of the rotating shaft (10) to a massage operation by the massage members (2), and in this massage machine (1), there is provided a horizontal movement mechanism for causing at least one of the pair of left and right massage members (2) to move in a horizontal direction along the rotating shaft (10) by rotating the rotating shaft (10) to thereby make an interval between the pair of left and right massage members (2) variable.
