

PRIVACY MANAGING ENTITY SELECTION IN COMMUNICATION SYSTEM

Abstract

5 In a home network of a communication system, wherein one or more cryptographic
key pairs are provisioned for utilization by subscribers of the home network to conceal
subscriber identifiers provided to one or more access points in the communication system, the
method comprises provisioning one or more privacy managing entity identifiers for
utilization by the subscribers when providing their concealed subscriber identifiers to the
10 communication system. Each of the one or more privacy managing entity identifiers identify
a given privacy managing entity in the communication system configured to de-conceal a
given subscriber identifier.
