

INFORMATION INDICATION METHOD, TERMINAL, AND COMPUTER STORAGE MEDIUM

ABSTRACT

Disclosed in embodiments of the present invention are an information indication method, a terminal, and a computer storage medium. The method comprises: a terminal receives SDAP data; and according to reflective quality-of-service indication (RQI) information in a packet header in the SDAP data, the terminal determines a mapping relationship to be updated, the mapping relationship comprising a first mapping relationship and/or a second mapping relationship, the first mapping relationship indicating a mapping relationship between an Internet protocol (IP) flow and a quality-of-service (QoS) flow corresponding to a first reflective quality-of-service function, and the second mapping relationship indicating a mapping relationship between a QoS flow and a data resource bearer (DRB) corresponding to a second reflective quality-of-service function.
