

ABSTRACT (FIG. 1)

"PORTABLE ELECTRONIC APPARATUS, IC CARD AND METHOD  
OF CONTROLLING PORTABLE ELECTRONIC APPARATUS"

5

According to one embodiment, a portable electronic  
apparatus includes a communicating unit, an executing  
unit, a generating unit, a storing unit, a first  
processing unit, and a second processing unit. The  
10 generating unit generates additional information  
associated with a result of the command processing  
executed by the executing unit. A first processing  
unit transmits a response containing the result of the  
command processing by the executing unit and  
15 information indicating presence of the additional  
information to the external apparatus, if the storing  
unit stores the additional information generated by the  
generating unit. A second processing unit transmits  
the additional information stored in the storing unit  
20 to the external apparatus, if receiving a command of  
requesting the additional information from the external  
apparatus.
