(54) Title: METHOD AND SYSTEM FOR THE PREVENTION OF UNDESIRABLE ACTIVITIES OF EXECUTABLE OBJECTS

(57) Abstract

A method for preventing undesirable activities of Executable Objects via an application, comprising denying to the same application, or one or more of its threads, access to a secured resource if it has previously exhibited Internet behavior and has not met a specific condition for accessing the resource, and denying the application, or one or more of its threads, Internet behavior if, at the time access is sought, it is accessing a secured resource. Events which are representative of Internet behavior are recorded in a memory. A record is kept, so that all the resources that should kept secured and when an application that has previously exhibited Internet behavior attempts to access one such secured resource, access to the secured resource is denied, unless at least a predetermined period of time has passed since the last Internet behavior, or it has performed at least a predetermined number of operations after exhibiting Internet behavior; or another preset condition has been fulfilled.
