

ABSTRACT

ANTICANCER AGENT CONTAINING NKT CELL LIGAND-CONTAINING
LIPOSOME COMPOSITION

(1) The purpose of the present invention is to provide an antitumor agent in which an effect of an immune checkpoint inhibitor is enhanced.

(2) The purpose of the present invention is also to provide a drug that could exhibit an effect even under conditions in which no antigen is present.

(1) Provided is an antitumor agent obtained by combining an immune checkpoint inhibitor with an NKT cell ligand-containing liposome composition.

(2) Also provided is a liposome composition containing an NKT cell ligand and an antigen.
