(54) Title: MEDICAL DELIVERY DEVICE

Fig. 11

(57) Abstract: A medical delivery device (1) comprises a barrel assembly (2) with a hollow interior (215) and a first thread arrangement (212), a rod assembly (3) with a second thread arrangement (312) and a plunger rod element (32) having a longitudinal axis and extending into the hollow interior (215) of the barrel assembly (2), and a dosage chamber (94) formed in the hollow interior (215) of the barrel assembly (2) with a variable volume limited by the plunger rod element (32) of the rod assembly (3). The barrel assembly (2) and the rod assembly (3) are rotatable relative to each other. The first thread arrangement (212) of the rod assembly (3) and the second thread arrangement (312) of the barrel assembly (2) engage such that rotation of the barrel assembly (2) and the rod assembly (3) relative to each other moves the rod assembly (3) along the longitudinal axis of its plunger rod assembly (3) causing the volume of the dosage chamber (94) to vary. The device (1) further comprises a rotation inhibiting formation (42) coupled to the barrel assembly (2) and the rod assembly. The rotation inhibiting formation (42) defines an extra rotation resistance affecting rotation of the barrel assembly (2) and the rod assembly (3) relative to each other.
