(54) Title: SUBSCRIBER SERVICE SELECTION OVER NON-CHANNELIZED MEDIA

(57) Abstract: The method comprises receiving a request from a computing device for an address. The request is to include a unique value associated with the computing device (102). Additionally, the username is bound to a context within a network element (104). The method also comprises assigning an address to the computing device within the context. A circuit is generated between the computing device and the network element based on the address (112).
