

ABSTRACT**A CUFF LINK**

A cuff link (1) for use in releasably coupling first and second sections (5a,5b) of a sleeve together, said cuff link (1) including first and second retaining members (2a,2b) having respective first and second attachment surfaces that are attached to opposing ends of a bridging member (3), wherein the first retaining member (2a) is releasably attachable to the bridging member (3), such that when the first retaining member (2a) is detached from the bridging member (3), the bridging member (3) is able to be inserted through first and second holes disposed in the first and second sections (5a,5b) of the sleeve respectively, and thereafter, when the first retaining member (2a) is releasably attached to the bridging member (3), the first and second sections (5a,5b) of the sleeve are arranged between the first and second retaining members (2a,2b) and the first and second retaining members (2a,2b) are substantially unable to pass through the holes in the first and second sections (5a,5b) of the sleeve.
