

METHOD FOR AT LEAST PARTIALLY DECONSTRUCTING A FLAT DISPLAY
SCREEN

ABSTRACT

5 The invention relates to a method for at least partially
deconstructing a flat display screen (10), the screen (10)
comprising: - a substantially flat faceplate (11) comprising
four side edges and a visible part (12) on a front face of the
screen (10), said visible part (12) being intended to display
10 images, - a frame (13) that mounts the faceplate (11) by
partially covering at least the front face and two side edges,
the method comprising steps of: - disposing (100) a single
screen (10) on a holding device (20), and - clamping (110) the
single screen (10) to the holding device (20). The method is
15 essentially characterized in that it also comprises a step of:
- effecting plastic deformation (120) of the frame (13) while
maintaining the integrity of the faceplate (11).
