

Abstract

The present invention provides a sterilizing detergent composition for hard surfaces, containing (a) betaine amphoteric surfactant, (b) a specific aromatic alcohol compound, (c) a chelating agent, and (d) water in % by mass within given ranges, wherein the ratio of the component (a) in the total surfactants is 65% by mass or more, and the pH at 25°C is 2 or higher and 6 or lower.
