

**METHOD FOR PROVIDING A SINGULATION DEVICE OF A STORING AND
DISPENSING CONTAINER**

5

ABSTRACT

The present invention relates to a method for providing a
singling device (20) of a storage and dispensing container (1)
10 for drug portions. The singling devices are, owing to drug
portions having different measurements, to be adapted to said
drug portions. For this purpose, the drug portions are
measured manually and then a suitable singling device is
ascertained. This is time-consuming and prone to error. The
15 problem is solved by a method in which, first, a to-be-
measured drug portion of a specific drug type is provided.
Then, at least one image of the drug portion is generated by a
detection device (45, 46; 65, 66; 76, 77; 78, 79) and the at
least one image is processed by image analysis, specified drug
20 information for the provided drug portion is determined, and
this information at least comprises the dimensions of the drug
portion. Finally, on the basis of the ascertained drug
information, a singling device (20) fitting the drug portions
to be singularized is identified.
