

Account Information Management Method and Apparatus

Abstract

5 An account information management method comprises: when an instruction of a first user for managing a first account thereof is received, obtaining information of a second user associated with the first user, and obtaining first transaction operation information of the first user performing a transaction operation by means of the first account (S201); then
10 determining, according to a preset matching condition, second transaction operation information associated with the second user, in the first transaction operation information (S220); and enabling the second transaction operation information to be included in a second user information table in the first account.
