

**ABSTRACT OF THE TECHNICAL CONTENT
OF THE INVENTION**

162162

5 The present invention relates to the field of therapeutic chemistry and more particularly to the field of hormonal pharmaceuticals.

10 It relates more precisely to novel hormonal pharmaceutical compositions formed from an estrogen-progestogen combination consisting of an estrogen compound and a progestogen compound, combined with or mixed with one or more non-toxic, inert, pharmaceutically acceptable excipients, intended for oral administration.

15 The present invention also relates to the use of the estrogen-progestogen mixture in which the estrogenic component and the progestative component are administered in a combined manner. The combination can be prescribed for continuous or intermittent administration, to give a composition intended for treating estrogen deficiencies, and for preventing osteoporosis and cardiovascular diseases in menopausal women.

20 The invention further relates to a method of preparation of these novel estrogen-progestogen pharmaceutical compositions.
