

ASSISTANCE FUNCTION START-UP METHOD, APPARATUS, AND DEVICE, AND READABLE STORAGE MEDIUM

ABSTRACT

An assistance function start-up method, apparatus, and device, and a readable storage medium, relating to the field of games. The method comprises: acquiring target data produced by a target account in a current game on the basis of a target operation (201); when the target data matches a trigger condition of an assistance function trigger, triggering the start-up of a game assistance function (202); and, in the current game of the target account, when receiving a trigger operation that meets an execution condition of a target operation, automatically executing the target operation on the basis of the game assistance function (203). By means of matching target data corresponding to a target operation with a trigger condition of an assistance function trigger, the game assistance function is started up when the target data meets the trigger condition; the target data is used for indicating the execution completion of a target operation; thus, the assistance function is started in a targeted manner, being started for a target operation having poor execution completion during the game; the accuracy of game assistance is high, and the assistance efficiency is also high.
