(54) Title: OPERATION MANAGEMENT

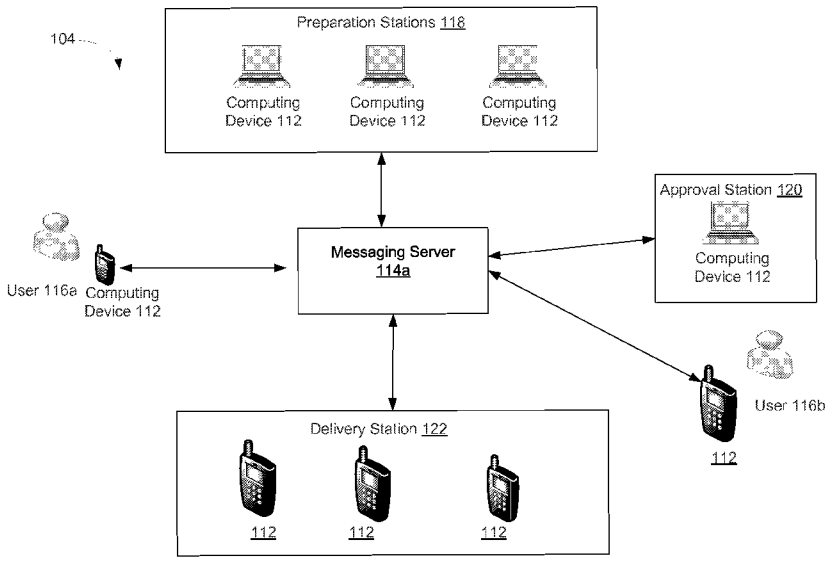

Fig. 4

(57) Abstract: Described herein are systems, methods, and apparatus for managing operations, for instance making orders and fulfilling orders, using one or more computing devices. In accordance with an example embodiment, an operations management system can include a self-order system, a self-payment system, and an order-fulfillment system. The self-order system, the self-payment system, and the order-fulfillment system can communicate with each other via a communication system that connects the systems, such as a wireless network for example. Using the operation management system, orders can be placed and fulfilled efficiently and with minimal personal interaction.
