

A YARN CLAMP ASSEMBLY OF A KNITTING MACHINE

ABSTRACT

A yarn clamp assembly of a knitting machine uses a wrap knitting method to weave a fabric having a side of a loop surface or a cut pile surface, and the base yarn of the base fabric forms two
5 fixing loops fixed onto the wool yarn of the loop or the wool yarn during repeated knitting processes, so that the loop or wool yarn will not be loosened easily from the base fabric due to the fixing effect of the two fixing loops.
