Abstract

WASHING MACHINE

5 A washing machine includes rotary drum 1 having an
approximately horizontal or a slanted rotational axis; water
tub 3 accommodating rotary drum 1 therein; motor 5 for
rotating rotary drum 1; current detector 24 for detecting a
current of motor 5; and controller 15 for controlling an
10 operation of motor 5 and a series of washing operations.
Controller 15 detects a state of laundry in rotary drum 1
based on a current value of motor 5 during a washing
operation.
