(54) Title: DEVICE FOR AND METHOD OF RECORDING INFORMATION ON A RECORD CARRIER

(57) Abstract: A recording device for recording information at addressable locations on a removable record carrier for storing data. The device comprises monitoring means (31) for monitoring recording of the data by storing recorded data addresses in a memory. Further, the device comprises examining means (32) for retrieving the recorded data based on addresses read from the memory, and for checking the recorded data addresses for presence of special data. This allows for tracking of changes of the special data stored on the record carrier. The device is capable of generating additional data depending on the special data and of recording the additional data on the record carrier without reading all the special data.
