(54) Title: PENILE IMPLANT DEVICE AND METHOD

FIG. 1

(57) Abstract: A penile implant enhancement device and method is provided. The penile implant device comprises a sleeve that is configured to at least partially surround a shaft of a penis and an external layer configured to cover one or more edges, surfaces, or layers of the sleeve to form one or more covered edges, surfaces, or layers themselves configured to align with the penis. The method comprises the steps of administering one or more anesthetic agents; cutting a transverse incision above the pubic symphysis; clamping a lower edge of the transverse incision; dissection through the one or more layers of subcutaneous tissue to expose tunica albuginea; everting the penis; creating a pocket between the tunica albuginea and the skin; providing the aforementioned penile implant device; suturing the covered edges, surfaces, or layers to the penis; trimming the external layer, reverting the penis; and closing the transverse incision.
