

injection tube of said infusion liquid being connected to said infusion chamber (1) via an infusion liquid passage opening through an external wall of said infusion chamber (1), said infusion liquid passage opening being situated between the first and the second tangent planes and in said first part.

33. Method for preparing infused drinks, comprising the following steps:

- 10 - introducing a capsule (3) containing a substance to be infused in the dry state provided with a front face comprising a filter wall, a ring surrounding said front face, a rear face, opposite said front face and a solid casing extending between said ring and said rear face and defining a container arranged to contain
15 said substance to be infused, in a position wherein said front face is substantially vertical, onto a capsule (3) support (2),
 - injecting an infusion liquid into said container of
20 said capsule (3),
 - infusion of said infusion liquid with said dry substance to be infused so as to form said infused drink in said infusion chamber (1) in fluid communication with the capsule (3) container, and
 - 25 - draining said infused liquid via an opening located in the bottom of said infusion chamber (1) after said infusion step,
- characterized in that said injection of the infusion liquid into said container of said capsule (3) is
30 performed via the infusion chamber (1), said injection being performed in said infusion chamber (1) via an infusion liquid injection tube (8), and in that it further comprises a relative translational movement
